

# No Pump Option – S<sub>1K</sub> & S<sub>2K</sub>

- *Pump and Reservoir removed.*
- *Stainless steel fittings and Nickel-brazed heat exchanger*

We now have available for sale, a “No Pump” version of the S<sub>1K</sub> and S<sub>2K</sub> chillers. The option consists of stainless and nickel wetted materials enabling this one configuration to meet the needs of the majority of no pump applications.

An internal bypass is not present in the *No Pump* configuration. Users must limit their supply pressure to a maximum of 80 PSIG (5.5 bar).

The option, priced at \$350, is available on new S<sub>1K</sub> and S<sub>2K</sub> orders only.

If your chiller application is in the sub-2kW range and does not require a pump, this new option is the solution.
